Troubleshooting Tools

1. Open the command prompt and use the ipconfig tool to find your computer's IPv4 address and default gateway, then take a screenshot of the output.

2Use the ping command to check the connectivity between your computer and www.google.com, then note down the average response time shown.

3. Run the tracert (or traceroute on Linux/Mac) command to www.flipkart.com and list the number of hops it takes to reach the destination.

```
C:\Users\Harsh>tracert www.flipkart.com

Tracing route to e348826.dsca.akamaiedge.net [23.55.244.178]
over a maximum of 30 hops:

  1    <1 ms    <1 ms    <1 ms  192.168.1.1
  2    16 ms    16 ms    12 ms  10.240.8.38
  3     *        *        *     Request timed out.
  4   252 ms   102 ms    40 ms  182.79.249.53
  5    78 ms    59 ms    56 ms  116.119.36.180
  6    37 ms    39 ms    81 ms  ae8.gpx-bom2.netarch.akamai.com [23.55.247.248]
  7    45 ms    38 ms    34 ms  a23-55-244-178.deploy.static.akamaitechnologies.com [23.55.244.178]

Trace complete.

C:\Users\Harsh>
```

4. Use the nslookup tool to find the IP address of www.spotify.com and explain in one line what this tool helps you verify.

```
C:\Users\Harsh>nslookup www.spotify.com
Server:  UnKnown
Address:  fe80::4663:c2ff:fe2a:15c8

Non-authoritative answer:
Name:    atc.spotify.map.fastly.net
Addresses:  2a04:4e42:31::810
          151.101.211.42
Aliases:  www.spotify.com
```

5. A friend says they cannot access Zomato's website from their laptop. Suggest a sequence of three troubleshooting commands (choose from: ping, ipconfig, tracert, nslookup) you would run to diagnose the issue, and briefly state what each command would help you check.

Step	Command	What It Checks
1	ipconfig	Checks the laptop's IP address, subnet mask, and default gateway to verify network configuration.
2	ping zomato.com	Checks connectivity to Zomato's website, although ping may fail if ICMP requests are blocked.
3	nslookup zomato.com	Checks whether DNS can resolve Zomato's domain name to an IP address.
