

1 Draw a labeled diagram of an ATX motherboard and mark at least 8 different slots and ports (such as RAM slots, PCIe slots, SATA ports, USB headers, CPU socket, power connector, etc.).

2 Research and list 3 popular CPU socket types (for example: LGA1151, AM4, LGA1200) and name one compatible CPU model for each.

Intel LGA1151

This only Support intel Cpu. In this compatible cpu is Intel Core i3-8100, i5-8400, i5-9600K, i7-8700K, i7-9700K, i9-9900K.

This is Manufacturer by Intel. The **LGA1151** socket was widely used by Intel from approximately **2015 to 2019**. It is use 8 cores and 8 threads in intel i7-9700k.

AMD AM4

This only Support Amd Cpu. In this compatible cpu is AMD Ryzen 3 3100, Ryzen 5 3600, Ryzen 5 5600, Ryzen 7 3700X, Ryzen 7 5800X, Ryzen 9 5900X.

This is Manufacturer by AMD. The **AM4** socket was introduced by AMD around **2016** and remained popular for several years. It is use 6 cores and 12 threads in AMD Ryzen 5 5600.

Intel LGA1200

This only Support intel Cpu. In this compatible cpu is Intel Core i3-10100, i5-10400, i5-10600K, i7-10700K, i9-10900K, i5-11400, i7-11700K

This is Manufacturer by Intel. It is use mainly around 2020. It is use 6 cores and 12 threads in Intel Core i5-10400.

3 Explain in your own words the primary functions of the CPU and the chipset on a motherboard, and describe how they work together when you open a music app like Spotify.

CPU and Chipset

Cpu(Central Processing Unit) : Cpu is Main processor of a computer. It performs calculations, executes instructions and runs applications. It is also responsible for connecting user and operating system.

Chipset:

The chipset is a group of controllers of the motherboard that helps different components communicate with each other. It manages connection between cpu and ram, storage, usb device.

*Open spotify

When you open a spotify the cpu processes the instructions needed to launch the application. Then it loads the interfaces and its functions according to cpu and network speed generally it's in milliseconds.

In that same time the chipset is also working on managing communication between cpu and other hardware devices, such as a ssd and ram and also if we connected audio devices and since spotify is an online streaming app so it's automatically connecting a cpu with network.

4 Find a clear photo of a real motherboard (from the internet or your own device), and identify at least 5 different ports or slots by circling them and labeling each one.
